

BLOCK 03 DESCRIPTION

BLOCK 04 LINKS

Drawing of a rotary milking parlour. The apparatus rotates like a carousel and is in [not found] use at many large scale dairy farms around the world. Designed to speed up milking for large herds, they slowly spin to allow a constant stream of cows to enter and exit the platform without disrupting milking. In some parlours, a new cow enters the carousel every 7.2 seconds, milking 450 cows per hour. Some rotary models are fully automated and allow for round-the-clock milking.
